

## PRAISE FOR SEPTEMBER UNIVERSITY

"*September University* is a nourishing feast of a book, replete with reasons to discover new meaning and purpose in the last chapters of your life, to welcome those years as life's most precious gift—an opportunity to cultivate wisdom and then put it to use in the world."

WALTER TRUETT ANDERSON, President Emeritus,  
World Academy of Art and Science

"*September University*, by leading scholar and visionary Charles Hayes, is a superb intellectual achievement by any standards. With sweeping scope and remarkable depth of knowledge across numerous disciplines, Hayes addresses the totality of the human experience—along with neglected questions surrounding life, death, freedom, authenticity, and truth—as he paves the way for a genuinely mature future in which citizens discover new degrees of potency and thoughtfulness. Rather than shying away from idealism, *September University* sets out a bold and timely blueprint for a post-consumer consciousness that is more culturally aware, media literate, and politically astute. Hayes delves with electrifying intelligence into the nature of meaning, identity, and community as he weaves together a comprehensive philosophy that enables people to transcend evolutionary baggage, social indoctrination, and illusions of limitation. *September University* is one of the finest books in print when it comes to the wisdom and existential bearings required to survive the current age of insanity."

JOHN F. SCHUMAKER, author, *In Search of Happiness: Understanding an Endangered State of Mind, Wings of Illusion, and The Age of Insanity*

"This is an important work. Wisdom evolves from real life experience, and Charles Hayes has both. For those who aspire to a better world, this is a must read."

PETER C. WHYBROW, Director of the Semel Institute for Human Behavior at UCLA and author, *American Mania: When More Is Not Enough*

"*September University* is the first philosophy integrating the university without walls and transformative learning—essential reading for learning in the 21st century."

DANIEL S. JANIK, MD, PhD, author, *Unlock the Genius Within: Neurobiological Trauma, Teaching, and Transformative Learning*
